

Aspida Mail (on our domain - @aspidamail.com)

- Once order is placed, you receive an email confirmation. Included in this is a link where you fill out your requested new email address.
- When we receive this, your new email account is set up and credentials are sent your way.
- Use your new email account to send encrypted message in our webmail interface or put on popular mail clients (Outlook, Thunderbird, iPhone, Android, and more!)

Aspida Mail + (email addresses on your domain/website)

- Once order is placed, you receive an email confirmation. Included in this is a link where you fill out the email addresses currently on your domain.
- When we receive this, the account is set up on our mail server and new credentials are sent your way.
 - You will then need to contact whoever is hosting you domain and have them point the MX (mail exchanger) records to our mail server.
 - ***Once the MX records are changed, your current mail (Inbox, Sent Messages, Drafts) will not automatically move to our mail server. You will need to work with your current email provider, or an IT provider, to either save your mail or migrate the email onto Aspida's mail server.***
- Use your email account in our webmail interface or update your email accounts with the new passwords and our server settings in popular mail clients (Outlook, Thunderbird, iPhone, Android, and more!)
