

# ASPIDA | mail

## HIPAA Compliant Encrypted Email

Send, Receive & Store Patient Data Securely

### How It Works

Simply type our keyword "encrypt" anywhere in your email's subject or body and the message is transmitted securely. Omission of the keyword will transmit the message unencrypted, just like regular email.

### One Solution, Two Options

**Aspida Mail** lets you set up a new email address to send encrypted messages (ie: [yourpractice@aspidamail.com](mailto:yourpractice@aspidamail.com)). This is recommended for offices that are currently using hosted email such as Gmail, AOL, Yahoo, etc.

**Aspida Mail+** allows you to send encrypted email through accounts on your domain (ie: [address@yourwebsite.com](mailto:address@yourwebsite.com)).

### What Our Customers Say

*"I trust Aspida Mail and it has never let me down. I love knowing that my communications are safe and secure."*

**Dr. John Flucke**

Technology Editor, Dental Products Report

*"The best encryption is one so easy your staff will use it."*

**Dr. Michael Van Gordon**

St. Helens, Oregon

*"I couldn't believe how easy the transition was to make. I'd recommend this to any provider."*

**Main Street Dental at 1910**

Forrest Grove, Oregon
